

Our Climate Solutions Portfolio aims to be the industry's registry of climate solutions. We're helping the sector answer three key questions:

What solutions exist to reduce emissions?

Stakeholders struggle to locate science-backed initiatives and programs with the potential to support their GHG-reduction goals. We want to signpost brands, manufacturers, and financial institutions to the right solutions.

Which solutions are credible and verifiable?

A limited amount of unstandardized data on the effectiveness of many of these solutions creates uncertainty and confusion about their efficacy. Having verifiable performance data is a core requirement to being a Climate Solutions Portfolio Registrant.

Which solutions do we prioritize?

Fragmented coordination across the industry and shifting priorities and timelines slows down the scaling of proven programs. We want to prioritize the solutions that can be deployed at scale between now and 2030.

We're on the hunt for **proven solutions, programs, & technologies with **data** and **broad sectoral reach** that demonstrate **significant reductions** in greenhouse gases.**

Who is eligible to become a Registered Solution?

Core Requirements

We're on the hunt for solutions, programs, & technologies with:

- data
- broad sectoral reach
- demonstration of significant carbon reduction
- a path to scale by 2030

Thematic Priority Areas

We prioritize solutions that:

- reduce process demand for energy
- reduce energy losses
- reduce/eliminate GHG emitted from generating heat and electricity
- minimize waste in each step of production
- reduce emissions from production of fibers

The Registration application is for climate solutions that:

- are already operating at a commercial scale with a track record of satisfied customers
- deliver emissions savings without compromising product quality and performance
- have verifiable performance data to demonstrate effectiveness
- would benefit from business development opportunities with Aii partners (manufacturers, brands, banks)
- do not need grant funding to deploy at scale; have a demonstrable business case
- can be integrated into Aii programs to support increased deployment of the solution

Why apply to become a Registrant?

Our goal is to enable the reduction of 100 mt of CO2e by 2030. Your solution can be a part of that.

Feature in our Climate Solutions Portfolio, with potential inclusion in Aii's social media, case studies, and webinars.

Marketing

Platform to Share Your Success

Access a dedicated platform to track and highlight your verifiable CO2e reductions.

Connect with top brands, retailers, facilities, and investors across the globe.

Access to Aii's Network

Independent Validation

Participate in our thorough vetting and review process.

Open doors to potential inclusion in our blended capital financing pipeline.

New Avenues for Financial Support

New Business

Become a recommended technology for our in-house programs, such as Clean by Design.
